

## Payentry NextGen Version 1.23

---

The current release includes the following changes grouped by operational department:

### Important Development Tags

- Fixed the Tax Form Preview Issue
- Redis Session Management

### Development Tags

- Fixed the Benefits Error Caused by Updating User Security

### Development Tags

#### **Fixed the Tax Form Preview Issue ( Dev Tag 58079)**

Resolved an issue where the Preview Tax Forms feature was preventing individual employee tax forms from being produced properly.

#### **Redis Session Management ( Dev Tag 57964)**

As we continue to scale the NextGen application, we have implemented an industry-standard tool to manage user session information. Aside from a more stable user experience, there should be no noticeable difference in terms of application functionality or behavior.

#### **Fixed the Benefits Error Caused by Updating User Security ( Dev Tag 58039)**

When setting user security (deny access) on certain EACACoverage fields, the impacted user would encounter an error when navigating to any of the Employee > Benefits sections. This has been resolved.
