Development Tags

- Added Measures to Reduce Duplicate Punches
- Added New Privilege to Block Punch Functionality on the Payentry App
- Additional Characters Now Supported in Time Off Request Report
- New Duplicate Punch Report
- New Punch In/Out Notes Report

Development Tags

Added Measures to Reduce Duplicate Punches (TM-113)

To reduce the chances of a duplicate punch from being created, we've updated multiple screens in Time Management to only allow the user to click the submit or save button a single time. The following pages are affected by this change: Punch In / Out, Kiosk, Add Punch, Add Hours/Quantity, Global Add Punch.

Added New Privilege to Block Punch Functionality on the Payentry App (TM-72)

A new privilege has been added called 'Cannot punch from mobile app.' If added to a security role, employees assigned to that role will no longer be able to punch in or out from the Payentry application. They will still be able to punch in and out from other locations (web app, kiosk, etc.) based on their security role.

Additional Characters Now Supported in Time Off Request Report (TM-11)

We have added support for certain unicode characters for the Time Off Request Report that were previously causing our reporting engine to fail. More specifically, the following unicode characters will not prevent a time off request report from running; left single quote, right single quote, left double quote, right double quote, em dash, and en dash.

New Duplicate Punch Report (TM-52)

We have added a new Duplicate Punch report, which will allow users to quickly identify punch records that have been duplicated in the Time Management system. This information can then be used to update timecard details in order to remove the duplicate(s).

New Punch In/Out Notes Report (TM-95)

We have created a new report that compiles a list of notes employees have added to their punches. Users can also specify the time frame of the punches to limit the list to a specific payroll period.
